

## Pre-Anesthetic Testing Consent

Client Name \_\_\_\_\_ Date \_\_\_\_\_

Patient Name \_\_\_\_\_ Age \_\_\_\_\_

Your pet is scheduled for a procedure that requires anesthesia. We would like to take this opportunity to recommend pre-anesthetic testing and explain why it is important to the health of your pet.

Because there is always the possibility a physical exam alone will not identify all of your pet's health problems, we strongly recommend that a pre-anesthetic profile (a combination of tests) be performed prior to anesthesia. The tests we recommend are similar to and equally as important as those your own physician would run if you were to undergo anesthesia.

It is important to understand that a pre-anesthetic profile does not guarantee the absence of anesthetic complications. It may, however, greatly reduce the risk of complications as well as identify medical conditions that could require medical treatment in the future.

- The combination of blood tests we recommend for the apparently healthy younger pet is listed below.

- ✓ BUN, Creatinine, ALKP, ALT, Glucose, Total Protein (kidneys, liver, diabetes/sugar, hydration, protein,)
- ✓ CBC (anemia, infection, clotting)
- ✓ Electrolytes (dehydration)

\$ 53.00

- The combination of blood tests we recommend for the older pet (8 years of age or older) is listed below.

- ✓ BUN, Creatinine, ALKP, ALT, Glucose, Total Protein, Albumin, Total Bilirubin, Phosphorus, Amylase, Cholesterol, Calcium (kidneys, liver, diabetes/sugar, hydration, protein, pancreas)
- ✓ CBC (anemia, infection, clotting)
- ✓ Electrolytes (dehydration)

\$ 85.00

- Please **COMPLETE** the recommend testing prior to administering anesthesia to my pet. If abnormalities are found, contact me at the phone number below:

Signature of Owner \_\_\_\_\_ Phone Number \_\_\_\_\_

- I **DECLINE** the recommended pre-anesthetic tests at this time and request you proceed with anesthesia. I understand that a medical condition may exist which would be impossible to identify. I understand that my pet's health could be at risk if such a condition goes undetected when my pet is placed under anesthesia.
